

CLAIMS

- Sub E1
1. A snowboard for sliding over snow, comprising:  
an elongated slide board having a slide surface on a lower surface  
thereof; and  
an elongated step board defining a deck on an upper surface thereof, and  
attached to an upper surface of the slide board in a substantially parallel and  
spaced relationship via a connecting member.
- Sub B D1
2. A snowboard according to claim 1, wherein the connecting member is  
provided in a substantially middle part of the slide board.
- Sub B D1
3. A snowboard according to claim 1, wherein the step board is somewhat  
greater in both length and width than the slide board.
4. A snowboard according to claim 1, wherein the step board is provided  
with an engagement portion for allowing engagement of a toe of a snowboarder  
in a nose part thereof.
5. A snowboard according to claim 1, wherein the step board is provided  
with at least one boot binding.
